A;Title: Chemical and functional characterization of a fragment of Cls con
A;Reference number: A32672; MUID:90283368; PMID:2141278
A;Roter annotation; erythro-beta-hydroxyasparagine site, content
A;Note: about half of the A chains contain erythro-beta-hydroxyasparagine
C;Comment: This protein is a serine proteinase that combines with Clq and s C2 and C4.
C;Comment: C1s is a dimer of identical chains, each of which is activated
C;Genetics:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A;Molecule type: protein

C;Punction:

C;Punction: cleaves activation peptide from trypsinogen to produce active trypsin A,Description: cleaves activation peptide from trypsinogen to produce active trypsin A,Pethway: intestinal digestive hydrolase cascade

C;Superfamily: enteropeptidase; Clr/Cls repeat homology; LDL receptor ligand-binding re;

C;Keywords: glycoprotein; hydrolase; serine proteinase; transmembrane protein; zymogen F;22-38/Domain: transmembrane #status predicted <MCH>
F;22-38/Domain: tenteropeptidase mini chain #status predicted <MCH>
F;118-799/Product: enteropeptidase mini chain #status predicted <MCH>
F;118-799/Product: enteropeptidase mini chain #status predicted <HCH>
F;118-799/Product: enteropeptidase havy chain #status predicted <HCH>
F;37-519/Domain: MAM homology <MAM>
F;351-519/Domain: MAM homology <MAM>
F;551-646/Domain: Clr/Cls repeat homology <Cll>
F;658-692/Domain: LDL receptor ligand-binding repeat homology <LDL2>
F;658-692/Domain: LDL receptor ligand-binding repeat homology <LDL2>
F;658-692/Domain: scavenger receptor cysteine-rich domain homology *status atypical <SR
F;800-1034/Product: enteropeptidase light chain #status predicted <LCH>
F;116,147,170,194,283,343,350,403,455,485,518,549,645,697,701,721,740,761,804,863,902,9
